

YIDA fiber laser printer Instruction manual

YIDA ELECTRONIC

We already set up all parameters according to your information; you can adjust the parameters "Marking speed" and "Power" to get different markings. While, **please do not change any other parameters' setting before checking with us.**

Decrease the "Marking speed" and increase the "Power" will make the marking more deep and obvious.

When need support pls contact me via WeChat (mob. +86 138 1986 6344)

In order to make you understand better of the laser printer setting, below are some guidance for you to check before install the laser printers:

Distance of the lens to object surface:	182 to 186mm
